EDUCATION

MBA, AI and Data
Universidad Politécnica de Madrid
2025 - 2026 | Madrid, Spain

Artificial Intelligence Technologies Specialist - In Progress
Tecnológico de Monterrey
2026 | Mexico

Completed Microcertificate: AI Fundamentals, Prompt Engineering, and LLM Agents
August 2026

B.S. Mechatronics Engineering, Minor in Robotics
Tecnológico de Monterrey
2016 - 2020 | Mexico City, Mexico

TECHNOLOGY

AI and Product
Generative AI · LLMs · RAG · Prompt Engineering · AI Prototyping · Product Roadmaps · Prioritization

Program Delivery
Cross-Functional Delivery · Risk Management · Operational Readiness · Root Cause Analysis · 8D · 5 Whys · Agile · Scrum · Lean

Development & Tools
Next.js · PostgreSQL · Vector Search · Python · SQL · REST APIs · GitHub · Vercel · Jira · Confluence · SharePoint · Microsoft Planner

CERTIFICATIONS & LANGUAGES

Certifications: Scrum Master Professional Certificate, 2021 | Database Design and SQL, University of Michigan, 2021

Languages: Spanish, Native | English, Fully Bilingual | French, B2 - DELF Certified | German, B2 Conversational

PROFESSIONAL SUMMARY

Technical Program Manager with 5+ years of experience solving complex problems across software, engineering, and global product delivery. Known for stepping into ambiguous, cross-functional issues, bringing the right specialists together, and driving them to closure before they escalate into program delays. MBA graduate with hands-on experience defining, building, and deploying AI-enabled products, combining systems thinking, product judgment, and operational execution.

PROFESSIONAL EXPERIENCE

Technical Program Manager
Ford Motor Company
February 2024 - Present | Mexico City, Mexico

- Designed and piloted an AI workflow assistant that automates creation of internal One Pager and Two Pager change documents, guiding structured data collection and cutting document preparation time by approximately 75% in initial testing.
- Coordinated multidisciplinary teams across engineering, manufacturing, plant operations, Supplier Quality, suppliers, and technical specialists without direct authority to drive complex global product programs to operational readiness.
- Resolved a high-risk systems-integration issue affecting approximately 15 preproduction units, clearing the backlog **overnight versus an estimated two-to-three-week recovery** and establishing permanent supplier controls.
- Prevented a potential two-to-three-week prototype build delay by tracing a fragmented international supply network, locating compatible battery-system components in Michigan, and coordinating **same-day recovery**.
- Closed **100% of assigned launch issues in 2025 (8/8)** within required milestones and coordinated early resolution of two additional risks before they became formal program issues.
- Drove approximately **80% of assigned issues to closure ahead of expected timelines** through early risk identification, structured root-cause analysis, and active removal of cross-functional impediments.
- Designed and drove adoption of a SharePoint and Planner operating system for approximately 10 program managers, centralizing documentation, milestones, ownership, and KPIs while reducing fragmented communication; still in active use by the team today.
- Built and deployed a retrieval-augmented (RAG) knowledge assistant to support Problem Solving trainings for approximately 10 program managers, and served as an informal driver of AI-tool adoption within the team.
- Designed and published a Copilot Studio agent embedded in a Ford program SharePoint site, grounded in program documentation (CRID reports, engineering milestones, design ownership) so the team can query current program status directly instead of searching scattered sources.

Trial Coordinator / Sign-Off Engineer
Ford Motor Company
August 2022 - February 2024 | Mexico City, Mexico

- Contributed to a cross-functional process redesign that reduced vehicle trial duration by **six weeks** through earlier planning, workflow standardization, and improved engineering-manufacturing coordination.
- Completed **30 First Pass validations** before the corresponding release milestone while consistently meeting internal readiness targets.
- Contributed to an estimated **20% reduction in component import lead time** by redesigning coordination and supply-chain workflows.

Design & Release Engineer
Ford Motor Company
April 2022 - August 2022 | Mexico City, Mexico

- Led the design and release of Frunk and Cargo Shade components for the Ford Mustang Mach-E, coordinating engineering, suppliers, manufacturing, finance, marketing, and UX requirements.
- Delivered assigned components on schedule and within budget while supporting design validation, risk analysis, and production readiness.

Design Engineer - Body Systems

Ford Motor Company

September 2021 - April 2022 | Mexico City, Mexico

- Performed design feasibility checks, engineering drawing reviews, and component assessments while coordinating requirements with multidisciplinary engineering teams.

Software Engineer

netLogistik

June 2021 - September 2021 | Mexico City, Mexico

- Supported supply-chain operations through software development, operational data analysis, and process optimization.

SELECTED AI AND PRODUCT PROJECTS

Job.hunter() | *Independent AI Product | 2026 | Live MVP*

- Defined, built, and deployed an AI-assisted job-search MVP that analyzes resumes, recommends roles, sources real openings, estimates candidate fit, and generates tailored application materials.
- Owned product scope, roadmap priorities, architecture, privacy, and AI-provider decisions; translated early user feedback into reliability improvements and a focused iteration backlog.

MBA AI Copilot | *Independent AI Product | 2026 | In Development*

- Designed and built an AI-enabled knowledge platform using Next.js, PostgreSQL, vector search, and large language models to centralize MBA materials and support contextual retrieval, synthesis, and decision-making.

Zentra | *MBA Capstone Team Project | 2026*

- Led MVP definition, roadmap prioritization, UX iteration, and development of a deployed B2B SaaS prototype for fitness-business operations, translating customer discovery into prioritized workflows and decision support.
